

ALFONSO LAVALLÉE

Clone 319

Wine and table grape variety. This vigorous, productive variety is horizontal or drooping and is generally managed with short pruning. The clusters are medium to large and the berries are very large.

MORE INFO

Features

- This vigorous, productive variety is horizontal or drooping and is generally managed with short pruning.
- It can however be trained and managed with long pruning.
- Alphonse Lavallée N is essentially used for the production of table grapes.
- Alphonse Lavallée N is fairly susceptible to powdery mildew and leaf spot. In the absence of problems with berry splitting,
- Alphonse Lavallée N clusters are not very susceptible to grey rot since they are loose.

Technological potential

- The clusters are medium to large and the berries are very large.
- The skin is thick, crispy.
- The pulp is firm and juicy.
- When cultivated as table grapes, this weak aromatic variety is suited for conservation and travels well.
- When made into wine, Alphonse Lavallée N makes common and ordinary wine, moderate color, medium alcohol content and is just slightly acidic.
